

Operations Review Hub

A collection of minimalist, abstract art prints and cards arranged on a dark, textured surface. The central piece is a large white card featuring a dark teal rectangle, a yellow circle, a large beige semi-circle, and a red semi-circle with vertical lines. To its left is a smaller white card with a teal shape and a brown vertical band. Below that is a dark card with a teal shape and white vertical lines. To the right of the central card is a dark card with a yellow circle and a red band. At the bottom are five vertical color swatches: dark grey, teal, beige, red, and yellow. On the far left is a small white card with a brown band and a teal shape. On the far right is a dark card with a yellow circle and a brown band. A small, dark, cylindrical object lies horizontally between the central card and the right side.

Review work is fragmented across inboxes, documents, and chat.

Incoming work

Requests arrive through multiple channels without one reliable priority order.

Review decisions

Context and approvals are difficult to find once the conversation moves on.

Stakeholder updates

Status reporting takes a separate manual pass and quickly falls out of date.

The first version covers one complete review path.

4 views

Intake, queue, detail, and stakeholder status.

2 roles

Internal operator and external stakeholder.

1 queue

A single ordered source of work and review status.

10 days

Build, review, polish, and publish cycle.

Run a focused beta before broadening the product.

01

Two operating teams

Test the same review path with different volumes, roles, and priorities.

02

Weekly review

Track friction, missing context, and the decisions users still make elsewhere.

03

Clear success gate

Expand only after teams can run the core queue without a parallel spreadsheet.

Next decision: confirm the two beta teams, prepare representative requests, and begin a three-week workflow test.
